Input-only selection, then hidden-template measurement
Eight slots; spectral proximity is not recovered image amplitude
Total spectral proximity (±4 packed FFT bins)
Fraction of 256 present observations
Clean template power near selected bins (%)
V185 phase selection
V187 pooled selection
Wider separation
Four-sector quota
Weakly covered spectral sectors
Mean minimum within-sector proximity (%)
0° sector partition
22.5° rotated partition
